cultivate the future

THE OFFICE OF THE FUTURE.

Companies are struggling to attract and retain talent. Additionally, employees begin to favor remote working instead of working inside the office.

Urban environments compromise our quality of life, often encouraging us to live life in a way that creates stress, bad habits, poor nutrition, and hyper connectivity.

Green benefits in offices are all the hype, but they often provide no real value to employees. 'Green' offices provide beautiful decoration, but do little to impact the culture of a workspace.

HOW WILL HQs EVOLVE?

COVID19 accelerates trends that have been developing over the recent years:

- Companies will need to **attract people to the office** in new ways, as smart-working has become the norm
- HQ/offices will become a **place to socialize**, get inspired, and charge energy
- Offices need to become **more flexible** in their layout to change on-demand
- Companies become more concerned with **health of employees**, and access to nutrition is one of the ways they can actively influence employee health

A close-up photograph of a purple flower bud, likely a lavender, with green sepals and fine white hairs. The image is overlaid with a semi-transparent purple gradient, which serves as the background for the text.

OUR MISSION

We unite people through the experience of growing their own food and the desire to make our world more sustainable.

We make vertical farming accessible, beautiful, and simple to provide communities in urban environments with their own unique connection to nature.

PLANTS CREATE BEAUTIFUL AND STIMULATING SPACES.

WE WANT TO DO MORE.

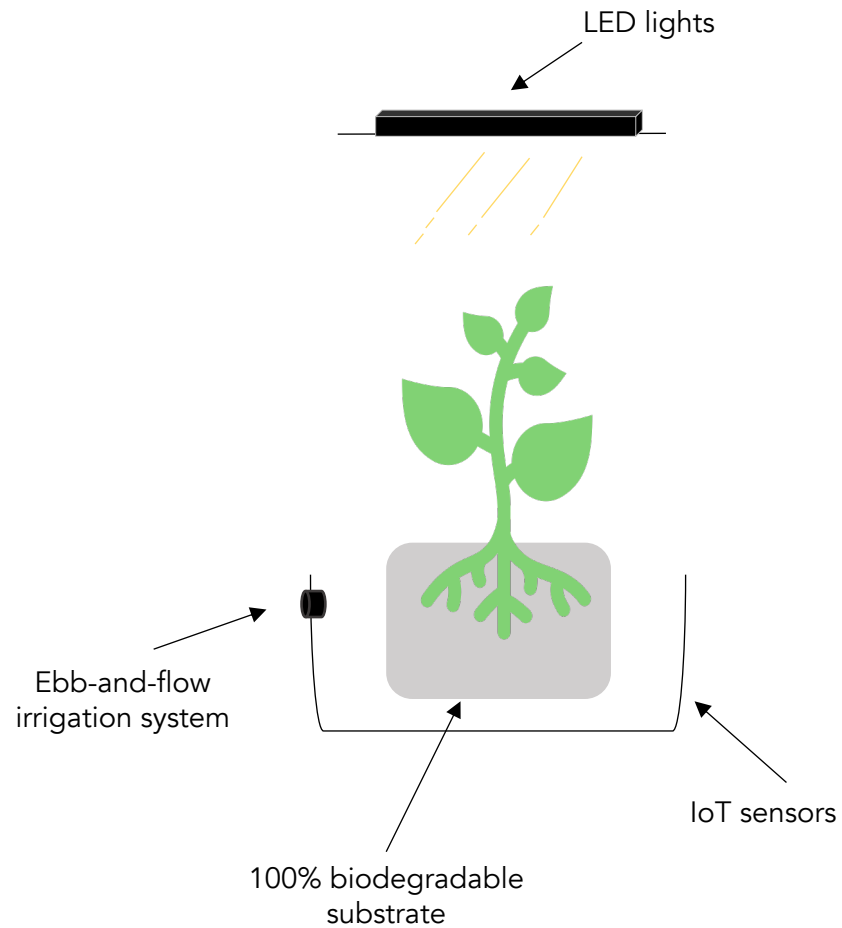

PRESENTING CULTEVO

THE OFFICE EVOLUTION

by **cultifutura**

HOW DOES CULTEVO WORK?

- Each cell is a separate environment where up to 15 plants can grow
- Light, temperature, and humidity are monitored and adjusted throughout the cultivation
- Unlocked through the app, only allowing a private access to the single users
- Water tank can have up to 3 months of autonomy

WHAT CAN YOU GROW?

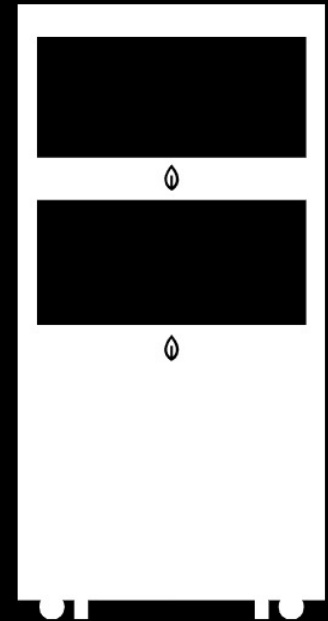

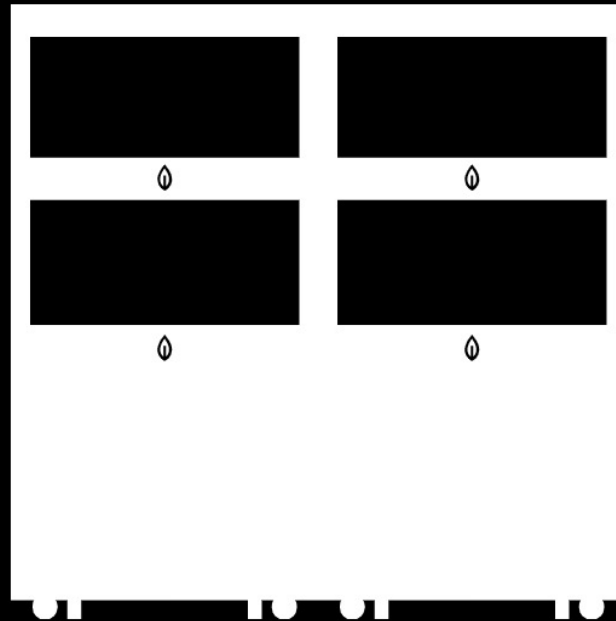

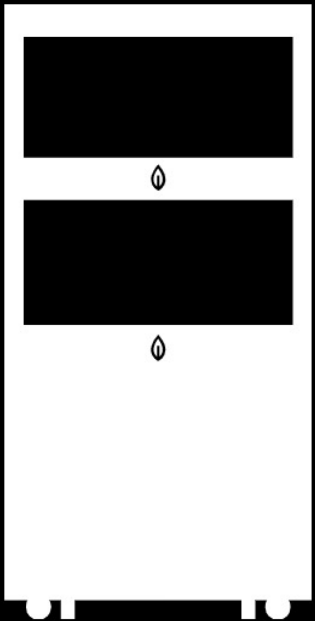

In CultEvo you can grow:

- Aromatic herbs like basil, thyme, mint, and many varieties difficult to find in stores;
- Salads from around the world;
- Nutrient packed microgreens;
- Spicy peppers and tiny tomatoes;
- And much more.

For example, one unit can grow up to 700 grams of basil per month and it can keep re-growing with the same output for up to 4-5 months.

A unique design focused on modularity

- CultEvo is a stand alone plug and play product that can exist in one unit or in a population of growing cells created for communities
- Our technology can be easily adapted to other types of frames thanks to its slot architecture design
- CultEvo's platform is designed to scale to every type of vertical farming application: from small to big vertical farms

Cultifutura App

An easy and intuitive interface

The CultEvo mobile app allows users to check in anytime, anywhere on the status of their garden. It also helps build dynamic communities tied to the food grown in a shared environment or at home.

The app provides users with many benefits:

- allows each user to unlock/lock their garden
- notifies users when plants are ready to harvest
- allows users to strategically grow different crops with their friends
- provides nutritional facts to educate users about the vitamins, antioxidants, and other beneficial aspects in vegetables, herbs, and fruits
- provides healthy recipe ideas
